**Abstract**

This document demonstrates the official Elsevier `elsarticle` class configured for *Progress in Materials Science*. It is a template, not a real manuscript: replace the front matter, body text, figures, tables, and references with your own material.

## 1. Introduction

This document is a submission template for *Progress in Materials Science*. It is typeset with the publisher's official LaTeX document class; the class, not this file, controls the page layout, fonts, and reference formatting. Every piece of text in this sample—including the author names, affiliations, abstract, and references—is a placeholder [1, 2].

Replace the sample material with your own manuscript, but keep the document class and the front-matter commands unchanged. Check the journal's current Guide for Authors before submission because article types, word limits, and reference styles can change.

## 2. Using this template

- Edit `main.tex` only; the accompanying `.cls`, `.sty`, and `.bst` files are official files and must remain unmodified.
- Put figures in `figures/` and include them with `\includegraphics`; a sample vector figure is already provided.
- Replace the entries in `references.bib` and cite them with `\cite`. The two entries shipped with the template are examples.
- Build the PDF with `latexmk -pdf main.tex`.

Table 1: An example table typeset with `booktabs`. Replace it with your own data.

| Item | Value | Unit |
|---|---|---|
| Alpha | 1.0 | a.u. |
| Beta | 2.0 | a.u. |

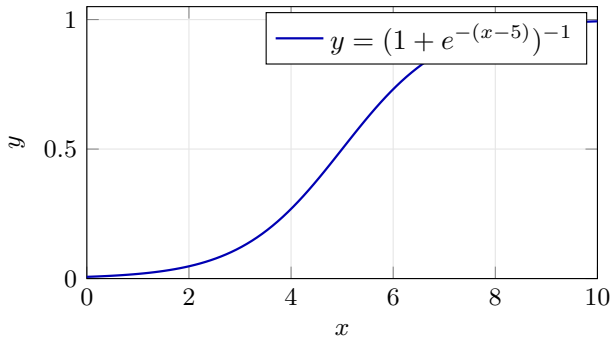

Figure 1: An example vector figure. Replace the file in `figures/` with your own artwork.

## 3. Mathematics, tables, and figures

Inline mathematics such as $E = mc^2$ and displayed equations are supported:

$$\int_{-\infty}^{\infty} e^{-x^2}\,\mathrm{d}x = \sqrt{\pi}. \tag{1}$$

## 4. Conclusion

Replace this paragraph with the conclusion of your manuscript. The template is intentionally minimal: journal-specific requirements should be taken from the current author guidelines rather than added as local formatting hacks.

## Declaration of competing interest

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence this work.

## Data availability

Data sharing is not applicable to this template article.
